

Arthur R. Miller

A lucid presentation of what misuse of computers is doing
and can do to individual freedoms by the possession and
distribution of personal information for manipulative
purposes . . . The author warns of a new form of human
slavery in an age when the computer is emerging from its
infancy.

—Ralph Nader

Computers, Data Banks, and Dossiers

Arthur R. Miller

**Surveillance,
Monitoring,
Manipulation,
Repression—these are not
words that most Americans
would like to see applied to
their own lives. Yet...**

"Today's laser technology already makes it feasible to store a twenty-page dossier on every American on a piece of tape that is less than 5000 feet long."

"Information handling on a computerized basis is a 'low visibility' operation; an individual may never discover that he is the subject of a file or be given any precise knowledge of what is in it."

"The seductive character of computerized information probably means that for some, success or failure in life may turn on what other people decide to put into their file and a programmer's ability—or inability—to evaluate, process, and interrelate information."

"This book should bestir all Americans to demand an end to abuses of computer technology before the light of liberty is extinguished in our land."

—From the Foreword by Senator Sam J. Ervin, Jr.

"A reasoned and detailed analysis . . . The answers which he suggests merit careful consideration."

—Senator Hubert H. Humphrey
